USER GUIDE

How to use Skool EdTech

Everything you need to set up your school and run it day to day: from signing up with Google to admissions, fees, exams and the parent portal. Follow the steps in order the first time; afterwards, jump to the part you need.

Contents

1. Create your school with Google
2. Your admin dashboard: the setup order
3. School settings: campus, logo and colours
4. Academic year and terms
5. Classes, sections, subjects and rooms
6. Staff and their logins
7. Hiring: from job post to new teacher
8. Timetable
9. Your website, admission form and fees
10. Parents apply online
11. Admissions to enrollment
12. A school in full swing
13. Import your existing data from Excel
14. Fees: structures, invoices and payments
15. Every day: attendance, exams and messages
16. What parents, students and teachers see
17. Light and dark mode
18. Getting help
19. Who does what: roles and access
20. Problems and answers

STEP 1 OF 18

Create your school with Google

The school owner or administrator

Sign up in under a minute with your Google account. Your school, its own web address and your administrator login are created at once, on a free trial with every feature.

1 Open the sign-up

Main website → Sign up (top right)

Click “Sign up”. Choose “Continue with Google” and pick the Google account you want to use as the school administrator.

2 Name your school and confirm your email

Type your school’s name. A 6-digit code is sent to your Gmail: enter it to prove the inbox is yours.

No card is needed for the free trial.

Use an email you check often: password resets and notices go there.

3 Note your User ID and school address

You get a User ID (for example ADM-...) and your school’s address (.../your-school). Click “Open my admin dashboard”.

Next time, sign in with “Continue with Google”, or with your User ID or email and password.

STEP 2 OF 18

Your admin dashboard: the setup order

School administrator

A new school starts empty. Set it up in this order, because each step uses the one before it: settings → academic year and terms → classes and sections → subjects and rooms → staff → students → fees → website.

1 Find your way around

The menu on the left holds every module. The dashboard shows your school at a glance: students, staff, admissions, fees and today’s classes.

2 Follow the setup order

Work through the steps in the next chapters from top to bottom. You can always come back and change anything later.

STEP 3 OF 18

School settings: campus, logo and colours

School administrator

Tell the system about your school: campuses, logo, theme colours, notifications and your own domain.

1 Campuses

Settings → Campuses

Your main campus is created for you. Add any other branches with their address. Classes, rooms and staff belong to a campus.

2 Branding

Settings → Branding

Upload your logo and choose your colours. They appear on the portal, report cards, receipts and your website.

3 Notifications and domain

Settings → Notifications / Domains

Choose which events send emails, and connect your own domain (e.g. www.yourschool.edu.pk) if your plan includes it.

STEP 4 OF 18

Academic year and terms

School administrator

Create the academic year (session) and its terms. Fees, attendance, exams and enrollments all belong to a year.

1 Add the year

Academics → Years & Terms

Add the session with its start and end dates (e.g. 2026-27, 1 April to 31 March) and mark it as the current year.

2 Add terms

Inside the year, add your terms (e.g. First Term, Second Term) with their dates. Exams and termly fees use them.

Add next year's session early: online admissions can then apply for it.

STEP 5 OF 18

Classes, sections, subjects and rooms

School administrator

Build the school’s structure: the classes you teach, their sections, the subjects and the rooms. Students are enrolled into sections; the timetable uses subjects and rooms.

1 Classes and sections

Academics → Classes & Sections

Add each class with its level (Playgroup = 0, Class 1 = 1 …) so classes sort correctly, then add its sections (A, B …) with an optional capacity.

2 Subjects

Academics → Subjects

Add your subjects with a short code (e.g. Mathematics · MATH).

3 Rooms

Academics → Rooms

Add classrooms and labs with their campus and capacity. The timetable warns you about clashes.

> Already have this on paper or in Excel? Classes and subjects can also be imported (see “Import your existing data”).

STEP 6 OF 18

Staff and their logins

School administrator

Add your teachers, accountant and other staff with their photo. Each one can get a login with the right role: they sign in to their own dashboard.

1 Add staff

Staff → Add staff

Enter the person’s details, designation, campus and whether they teach. Tick “create login” to email them their User ID and a temporary password.

Many staff at once? Use Staff → Import with the Excel template.

2 Give the right access

Users & Access

Each login has roles: Principal, School Admin, Accounts, Teacher, Non-teaching staff, Parent or Student. The role decides what they see and can change.

STEP 7 OF 18

Hiring: from job post to new teacher

School administrator

Post a vacancy, and it appears on your website. Candidates apply online with their photo and details; you shortlist, interview and hire. Hiring adds them to your staff with their login, in one click.

1 Post the job

Staff → Hiring → New job post

Enter the title, staff type, department, campus, openings and closing date, set the status to Open and save. The post appears in the Careers section of your school website.

2 Candidates apply online

Your school website → Careers → Apply now

Candidates send their photo, contact details, qualification and experience. Each application arrives in Hiring as “Applied”, and you get a notification.

3 Shortlist and interview

Staff → Hiring → the candidate

Move a good candidate to Shortlisted, then schedule the interview (date, mode, interviewer). Afterwards record the result: score, recommendation and notes. A positive result moves them to Selected.

Upload their CV and certificates to the candidate’s documents.

4 Hire

Choose the joining date and click “Hire and add to staff”. They join your staff list with a teacher login; the User ID and a temporary password are shown once and emailed to them.

STEP 8 OF 18

Timetable

School administrator

Build each section’s weekly timetable from subjects, teachers and rooms. Teachers, students and parents see it on their dashboards.

1 Add periods

Timetable → Timetable

Choose a section, then add periods: day, time, subject, teacher and room. Clashes (a teacher or room booked twice) are refused.

2 Watch the day

Timetable → Class monitor

See which classes are running right now and whether the teacher has started them.

STEP 9 OF 18

Your website, admission form and fees

School administrator

Every school gets a public website built from its data. Design your own online admission form, choose which documents parents upload, and publish your fee structure.

1 Texts and photos

Website

Add your tagline, about text, principal's message, contact details, social links and gallery photos. Empty texts are generated from your data.

2 Design the admission form

Website → Design the admission form

Choose which standard fields to ask and which are mandatory, then add your own: text, number, date, dropdowns, checkboxes, an "I agree" box and document uploads (B-Form, result card ...). A field can be asked for some classes only, and its answer can be saved straight into the student's record (e.g. B-Form number, blood group, parent's CNIC).

3 Publish your fees

Website → Fees on the website

Turn on "Show the fee structure to parents". Each class's fees (from Finance → Fee structures) appear on your website and on the admission form.

STEP 10 OF 18

Parents apply online

Parents (on your school website)

Parents open your website, check the fees and click “Apply now”. Your own admission form opens; every field is checked before it can be sent.

1 Apply now

Your school website → Apply now

Parents fill in your form, upload the documents you asked for and send it. They get an application number on screen.

- Mistakes are shown at each field, all at once.
- The same child cannot be sent twice: parents are told their application is already in progress.

2 It arrives in Admissions

You get a notification. The application appears in Admissions as “Submitted”, marked as from the website, with its answers and documents.

STEP 11 OF 18

Admissions to enrollment

School administrator / office

Move each application through the steps: documents verified → interview or test → review → approved → enrolled. Enrolling creates the student, the parent and their logins in one click.

1 Review the application

Admissions → the application

Check the answers and documents. Move it to “Docs verified”, schedule an interview or test and record the result.

2 Approve and enroll

Approve it, then Enroll: choose the section, roll number and admission date. Tick “Create parent login” and “Create student login”.

Everything from the application moves to the student record: details, photo, linked answers (B-Form, blood group, CNIC …) and documents.

A sibling’s parent is linked to the existing parent account instead of creating a duplicate.

STEP 12 OF 18

A school in full swing

Everyone

This is what your dashboards look like once the school is busy: hundreds of students, staff, applications, invoices and a full timetable, all at a glance.

1 The dashboard

Today’s work (applications to review, fees collected, requests waiting), the key numbers and live classes: which have started, which are late.

2 Every list stays fast

Search, filter and export any list: students, staff, applications, invoices. Counts at the top show where things stand.

STEP 13 OF 18

Import your existing data from Excel

School administrator

Already have students, staff, classes or fees in Excel? Import them in minutes instead of typing. Every list can also be exported to Excel or CSV.

1 Download the template

Students (or Staff, Academics, Finance) → Import

Download the Excel or CSV template. Copy your data into it, keeping the column headers.

2 Check and import

Choose the file. Every row is checked first: good rows are imported and rows with problems are listed with the reason, in a report you can download, fix and import again.

Import in this order: classes and sections → students → fee data.

Excel import and export is part of the Growth plan and above (included in your free trial).

3 Export any list

Export (on each list)

Export students, staff, invoices and more to Excel or CSV: the current page or all pages.

STEP 14 OF 18

Fees: structures, invoices and payments

School administrator / accounts

Set each class’s fees once, generate invoices for a month, record payments and print receipts. Parents see their invoices and receipts in their portal.

1 Categories and structures

Finance → Categories / Fee structures

Add fee categories (Admission, Tuition, Transport …). Then create a fee structure for each class: the amount and how often (one-time, monthly, termly, annual).

2 Assign and generate invoices

Finance → Fee structures → Assign to students; Finance → Invoices → Generate

Assign the structure to the class’s students, then generate invoices for a billing period with issue and due dates.

3 Payments and receipts

Finance → Payments

Record cash, bank or online payments against invoices; a receipt is produced for each. Concessions and scholarships reduce what a student owes.

STEP 15 OF 18

Every day: attendance, exams and messages

Teachers, principal and administrator

Teachers mark attendance and enter marks from their own dashboards; you publish results and send announcements.

1 Attendance

Teacher → Class Attendance; Admin → Attendance

Teachers mark their class present, absent or late. Staff check in (with location, where enabled). You see the school's attendance and approve leave.

2 Exams and results

Exams & Results

Create an exam for a term, teachers enter marks, then publish: students and parents see results and report cards.

3 Communication

Communication

Publish announcements to the whole school, a class or a role. Parents and teachers can message each other.

STEP 16 OF 18

What parents, students and teachers see

Parents, students and teachers

Everyone signs in at your school’s address with the User ID and password they received by email, and sees only what concerns them.

1 Parents

Their children’s attendance, timetable, homework, results, fee invoices and receipts, notices and messages to teachers. One login covers all their children.

2 Students

Their classes, timetable, learning material, assignments, exams, results, fees and documents.

3 Teachers

Their timetable, today’s classes, attendance, assignments, marks entry, own attendance, leave and payslips.

4 First sign-in

They change the temporary password and confirm their email. “Forgot password” and “Forgot User ID” are on the sign-in page.

STEP 17 OF 18

Light and dark mode

Everyone

Every page works in light and in dark mode, on a computer and on a phone. Each person chooses what is easier on their eyes.

1 Switch the theme

Top right of every page: the moon / sun button

Click it to switch between light and dark. Your choice is remembered on that device.

STEP 18 OF 18

Getting help

Everyone

Watch this walkthrough again or open the user guide at any time. For anything else, contact support.

1 This guide

Main website → How it works / User guide

Open the written guide or download it as a PDF to keep or print for your staff.

2 Support

Email or call us using the contact details at the bottom of the main website. Tell us your school’s address and User ID so we can help quickly.

Who does what: roles and access

Every person signs in at your school's address and sees only what their role allows. Change roles any time in **Users & Access**; one person can hold several roles (e.g. a teacher who is also a parent).

ROLE	WHAT THEY DO	HOW THEY GET A LOGIN
School administrator	Sets up and runs everything: settings, academics, staff, students, admissions, fees, website, access.	Created at sign-up (Google or email).
Principal	Oversees the school: dashboards, attendance, results, finance and reports; approves where needed.	Given by the administrator in Users & Access.
Accounts	Fee structures, invoices, payments, concessions, payroll and financial reports.	Given by the administrator in Users & Access.
Teacher	Timetable, class attendance, assignments, learning material, marks entry, own leave and payslips.	Created with the staff record (Staff → Add staff).
Non-teaching staff	Own attendance, leave, assigned tasks and payslips.	Created with the staff record.
Parent	Children's attendance, timetable, homework, results, fees, receipts and messages.	Created when the child is enrolled (or imported).
Student	Classes, timetable, material, assignments, exams, results, fees and documents.	Created when enrolled (optional).

Problems and answers

I forgot my password or User ID.

On your school's sign-in page use "Forgot password" or "Forgot User ID". A link or your ID is sent to the email on your account. If you signed up with Google, "Continue with Google" always works.

A teacher or parent did not get their login email.

Ask them to check spam. Then open Users & Access, find the person and use "Reset password": new sign-in details are issued. Make sure their email is spelled correctly.

Someone sees too much (or too little).

What a person sees depends on their role. Change their roles in Users & Access. A teacher who is also a parent can hold both roles with one login.

I cannot enroll a student.

The application must be "Approved" first, and the class needs at least one section. Create sections in Academics → Classes & Sections.

Online admissions say "closed".

Website → Switches → turn on "Accept admission applications online" and make sure "Website is online" is on. A current or upcoming academic year must exist.

Fees do not show on my website.

Website → Fees on the website → turn on "Show the fee structure to parents". Only active fee structures of the current and upcoming sessions are shown.

My Excel import shows errors.

Download the error report: each row lists what is wrong (missing column, unknown class, bad date). Fix those rows and import only them again; rows already imported are not repeated.

A feature is locked.

Some modules belong to higher plans (e.g. Exams, LMS, Payroll and Excel import on Growth). Open Plans & Billing to see what your plan includes and upgrade.

Still need help?

Contact us with your school’s address and your User ID, and tell us what you were trying to do.
